Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed,

and is derived by analysis of the total score distribution.

XX

CC This invention relates to 59 human secreted proteins and the nucleotide
CC sequences encoding them. Sequences AAC59788-C59846 and AAB34687-B34745
CC represent the proteins and their encoding nucleotide sequences, and
CC sequences AAB34746-B34771 represent fragments of the proteins. Probes
CC for the DNA sequences are represented by sequences AAC59847-C59596. The
CC proteins exhibit neuroprotective, dermatological, immunosuppressive,
CC antiinflammatory, antianaemic, nootropic, antiparkinsonian,
CC cerebroprotective, haemostatic, vulnerary, cytostatic, antipsoriatic,
CC antibacterial, virucide, and fungicide activity. The proteins and
CC nucleotide sequences are useful as nutritional sources or supplements
CC and in research. The proteins are useful for treating immune deficiency

CC and disorders, which may be genetic or resulting from infections,
 CC autoimmune disorders such as multiple sclerosis, systemic lupus
 CC erythmatosus, rheumatoid arthritis, and for treating myeloid or lymphoid
 CC cell deficiencies such as anaemias by regulating haematopoiesis. The
 CC proteins are also useful in compositions for bone, cartilage, tendon,
 CC ligament and/or nerve tissue growth or regeneration, for wound healing,
 CC tissue repair and replacement and in the treatment of wounds, incisions
 CC and ulcers. Other uses include in the treatment of central and
 CC peripheral nervous system and neuropathies such as Alzheimer's and
 CC Parkinson's diseases and Shy-Drager syndrome, and mechanical and
 CC traumatic disorders, such as spinal cord disorders, head trauma and
 CC stroke. The proteins may also be used as a contraceptive, and for
 CC treating coagulation disorders such as haemophilias. The protein and
 CC nucleotide sequences with cadherin activity are useful for treating
 CC cancer. Other uses for the protein include for inhibiting the growth,
 CC infection or function of, or killing, infectious agents such as bacteria,
 CC virus, fungi and other parasites, for effecting bodily characteristics
 CC such as height, weight, hair colour, effecting biorhythms or cardiac
 CC cycles or rhythms, effecting metabolism, catabolism, anabolism,
 CC processing, utilization, storage or elimination of dietary fat, lipid,
 CC protein, carbohydrate, vitamins, minerals, cofactors, effecting
 CC behavioural characteristics, providing analgesic effects and for treating
 CC hyperproliferative disorders such as psoriasis.

XX
PS Claim 1; Page 220-221; 327pp; English.
XX
CC AAZ98109 to AAZ98242 encode AAY87224 to AAY87357 which represent the
CC human signal peptide-containing proteins HSPP-1 to HSPP-134. HSPPs have
CC anticancer, anti-inflammatory, antimicrobial, nootropic, hepatotropic,
CC neuroprotective, cardiovascular and antiasthmatic activities, and can
CC be used in gene therapy. HSPPs can be used to treat or prevent disorders
CC associated with decreased activity or function of HSPP. Antagonists of
CC HSPP are used to treat or prevent disorders associated with increased
CC activity or function of HSPP. Such diseases include cell proliferation
CC (including cancer), inflammation, cardiovascular, neurological,
CC reproductive or developmental disorders, (e.g. arteriosclerosis,
CC cirrhosis, psoriasis, acquired immune deficiency syndrome, anaemia,
CC asthma, Crohn's disease, microbial or other infections, congestive or
CC ischaemic heart disease, Alzheimer's, Parkinson's or Huntington's
CC diseases, schizophrenia, ovulatory defects, muscular dystrophy). HSPP
CC nucleic acids can be used for the recombinant production of HSPP, for
CC detecting HSPP in standard hybridisation and amplification assays (for
CC diagnosis and monitoring), in gene therapy, as antisense,

 PT New lung cancer specific gene for the treatment and diagnosis of lung
 PT cancer -
 XX
 PS Claim 2; Page 115-116; 119pp; English.
 XX
 CC The present sequence is encoded by a human lung cancer specific gene
 CC (LSG), and represents a polypeptide designated Lng104. LSGs are useful
 CC in the treatment and diagnosis of lung cancer. The treatment of lung
 CC cancer comprises the administration of a molecule which down regulates
 CC the expression of an LSG. An immune response can be mounted against a
 CC target cell expressing an LSG. Identification of potential therapeutic
 CC agents for use in imaging and treating lung cancer which comprises
 CC screening molecules for an ability to bind to or decrease expression
 CC of an LSG relative to LSG in the absence of the agent where the ability
 CC of a molecule to bind to the LSG or decrease expression of the LSG is
 CC indicative of the molecule being useful in imaging and treating lung
 CC cancer.

PT New PRO842 polypeptides having structural homology to interleukin-8,
PT useful for treating or diagnosing a mammal with an inflammatory disease
PT or immune related disease, e.g. rheumatoid arthritis, osteoarthritis or
PT allergic disease -
XX
PS Claim 1; Fig 2; 118pp; English.
XX
CC The present sequence is the protein sequence of PRO842 (CK27),
CC a novel human chemokine (mol.wt. 13.8 kDa, pI 11.16) having
CC structural homology to interleukin-8. Microarray analysis has
CC shown PRO842 to be over-expressed in colon tumour, lung tumour and
CC breast tumour cells compared with non-cancerous human tissue,
CC making it a useful diagnostic marker for cancerous tumours and a
CC therapeutic target. PRO842 also plays a role in the inflammatory
CC response, having chemoattractant properties toward monocytes and
CC dendritic cells. The invention provides PRO842 polypeptides,
CC polynucleotides, host cells, vectors and antibodies, as well as
CC methods of treating an immune related disorder by using a PRO842
CC polypeptide, or an agonist, antagonist or antibody. The immune
CC related disorder may be systemic lupus erythematosus, rheumatoid

XX

PT New isolated secreted and transmembrane PRO polypeptide useful for
PT modulating biological activity of a cell, or for treating
PT sports-related joint problems, osteoarthritis or rheumatoid arthritis

XX

PS Claim 20; Fig 26; 399pp; English.

XX

CC The invention relates to an isolated secreted and transmembrane PRO
CC polypeptide having 80 % sequence identity to a sequence appearing
CC as ABG95851-ABG95934 or their associated signal peptide, or a sequence of
CC an extracellular domain of the proteins with their associated signal
CC peptide or lacking its associated signal peptide. Also included are
CC the nucleic acids encoding the proteins, vectors, host cells,
CC fusion proteins and antibodies which specifically bind to the proteins.
CC The proteins are useful for detecting a polypeptide designated as A, B, C
CC or D in a sample suspected of containing an A, B, C or D polypeptide,

CC by contacting the sample with a polypeptide designated as E, F, G, H or
 CC I (or vice versa) and determining the formation of a A/E, B/F, B/G, C/H
 CC or D/I polypeptide conjugate in the sample, where the formation of the
 CC conjugate is indicative of the presence of an A, B, C or D polypeptide
 CC in the sample, where A is a PRO10272 polypeptide, B is a PRO20110
 CC polypeptide, C is a PRO10096 polypeptide, D is a PRO19760 polypeptide,
 CC E is a PRO5801 polypeptide, F is a PRO1 polypeptide, G is a PRO20040
 CC polypeptide, H is a PRO20233 polypeptide and I is a PRO1890
 CC polypeptide. The sample comprises a cell suspected of expressing the A,
 CC B, C or D polypeptide. The E, F, G, H or I polypeptide is labeled with
 CC a detectable label or is attached to a solid support. The proteins are
 CC useful for linking a bioactive molecule to a cell expressing a
 CC polypeptide designated as A, B, C or D or E, F, G, H or I. The bioactive
 CC molecule is a toxin, a radiolabel or an antibody. The bioactive molecule
 CC causes death of the cell. A, B, C, D, E, F, G, H, or I, or antibodies
 CC against them are useful for modulating a biological activity of a cell
 CC expressing a polypeptide designated as A, B, C or D or E, F, G, H, or
 CC I. The cell is killed. The proteins are useful for identifying
 CC agonists or antagonists, for the preparation of a medicament useful in
 CC the treatment of a condition which is responsive to the proteins, as
 CC molecular weight markers for protein electrophoresis purposes, and as
 CC therapeutic agents for treating sports-related joint problems,
 CC articular cartilage defects, osteoarthritis or rheumatoid arthritis.
 CC Nucleic acids encoding the proteins are useful as hybridisation probes,
 CC in chromosome and gene mapping, in the generation of anti-sense RNA and
 CC DNA, for the preparation of the proteins, to generate transgenic or
 CC knockout animals which are useful in the development and screening of
 CC therapeutic useful reagents, for chromosome identification, and in gene
 CC therapy. The antibody is useful as a therapeutic agent, in a diagnostic
 CC assay and for affinity purification of the protein from recombinant
 CC cell culture natural sources. The present sequence represents a novel
 CC secreted or transmembrane protein of the invention.

XX
PT New secreted and transmembrane PRO polypeptides and nucleic acid
PT molecules encoding the polypeptides, useful in gene therapy or
PT preparing a medicament for treating a condition that is responsive to
PT the PRO polypeptide or antibody -
XX
PS Disclosure; Fig 26; 409pp; English.
XX
CC The invention describes novel isolated PRO polypeptides. The PRO
CC polypeptides or anti-PRO antibodies are useful in preparing a medicament
CC for treating a condition that is responsive to the PRO polypeptide or
CC antibody. The PRO nucleotide sequences may be used as hybridisation
CC probes in chromosome and gene mapping, or in generating antisense RNA
CC and DNA. PRO nucleic acids are also useful in preparing PRO polypeptides,
CC in assays to identify other proteins or molecules involved in binding
CC reaction, to generate transgenic animals or knockout animals, which in
CC turn are useful in the development and screening of therapeutically
CC useful reagents, for chromosome identification, and tissue typing. The
CC PRO polypeptides and nucleic acid molecules are also useful in gene
CC therapy, and as molecular weight markers for protein electrophoresis
CC purposes. The anti-PRO antibodies may be used in diagnostic assays for
CC PRO, or for the affinity purification of PRO from recombinant cell
CC culture or natural sources. This is the amino acid sequence of a novel
CC human secreted and transmembrane PRO polypeptide.

 XX
 PT New secreted and transmembrane PRO polypeptides and nucleic acids,
 PT useful in gene therapy, in chromosome and gene mapping, as chromosome
 PT markers, in tissue typing, and in chromosome identification -
 XX
 PS Claim 11; Fig 140; 706pp; English.
 XX
 CC The invention discloses human nucleic acids encoding secreted and
 CC transmembrane (PRO) polypeptides. Also disclosed is an antibody that
 CC specifically binds to the PRO polypeptide, a method for stimulating the
 CC release of tumour necrosis factor alpha (TNF-alpha) from human blood by
 CC contacting the blood a PRO polypeptide, a method for stimulating the
 CC proliferation or differentiation of chondrocyte cells by contacting the
 CC cells with a PRO polypeptide, a method for detecting the presence of a
 CC tumour in a mammal and an oligonucleotide probe derived from any of the
 CC PRO nucleotide sequences. The nucleotide sequences are useful as probes,
 CC in chromosome and gene mapping, in generating antisense RNA and DNA, in
 CC preparing PRO polypeptides by recombinant techniques and in gene therapy
 CC (e.g. for replacement of defective gene). The PRO polypeptides are useful
 CC as molecular weight markers for protein electrophoresis purposes, for
 CC chromosome identification, as chromosome markers, as therapeutic agents,
 CC for stimulating the release of TNF-alpha from human blood, for
 CC stimulating the proliferation or differentiation of chondrocytes and
 CC detecting the presence of a tumour. The PRO polypeptides and nucleic
 CC acids may also be used diagnostically for tissue typing. The sequences
 CC presented in ABU67406-ABU67710 are the PRO polypeptides of the invention.

PT Novel isolated PRO polypeptides e.g., PRO826, PRO1068, PRO1184, PRO1346

PT and PRO1375, which stimulate proliferation of stimulated T-lymphocytes
PT are therapeutically useful for enhancing immune response and in cancer
PT treatments -

XX

PS Claim 12; Fig 99; 648pp; English.

XX

CC The invention describes an isolated human PRO polypeptide. The PRO
CC polypeptides are useful in detecting PRO polypeptides in a sample, in
CC linking a bioactive molecule to a cell expressing a PRO polypeptide, and
CC in modulating at least one biological activity of a cell expressing a PRO
CC polypeptide. PRO1312 stimulates hypertrophy of neonatal heart and is thus
CC useful for treating cardiac insufficiency disorders. PRO1154 and PRO1186
CC stimulate adrenal cortical capillary endothelial growth, and PRO536,
CC PRO943, PRO828, PRO826, PRO1068 or PRO535, PRO826, PRO819, PRO1126,
CC PRO1360 and PRO1387 induce c-fos in endothelial cells, and are thus
CC useful for treating conditions or disorders where angiogenesis would be
CC beneficial, e.g. wound healing and antagonist of this polypeptide are
CC useful for treating cancerous tumours. PRO812 inhibits vascular
CC endothelial growth factor (VEGF) stimulated proliferation of endothelial
CC cells and is thus useful for inhibiting endothelial cell growth in
CC mammals which would be beneficial in inhibiting tumour growth. PRO826,
CC PRO1068, PRO1184, PRO1346 and PRO1375 stimulate proliferation of
CC stimulated T-lymphocytes and are therapeutically useful for enhancing
CC immune response. PRO828, PRO826, PRO1068 or PRO1132 enhance survival of
CC retinal neurons cells (PRO1132 is also enhances survival/proliferation of
CC rod photoreceptor cells) and therefore are useful for treating retinal
CC disorders of injuries, e.g. retinitis pigmentosum, AMD. PRO819, PRO813
CC and PRO11066 induce proliferation of mammalian kidney mesangial cells,
CC and therefore are useful for treating kidney disorders associated with
CC decreased mesangial cell function such as Berger disease or other
CC nephropathies associated with dermatitis, herpetiformis or Crohn's
CC disease. PRO1310, PRO844, PRO1312, PRO1192 and PRO1387 induce the
CC proliferation and/or redifferentiation of chondrocytes in culture and
CC are thus useful for treating sports injuries, and arthritis. This
CC is the amino acid sequence of a novel human PRO protein.

PT New transmembrane polypeptides and nucleic acids encoding the
PT polypeptides, useful in gene therapy, in chromosome identification, as
PT chromosome markers, or in generating probes -

XX

PS Claim 12; Fig 99; 650pp; English.

XX

CC The invention discloses isolated PRO secreted/transmembrane polypeptides
CC comprising a sequence without signal peptide and the nucleic acid
CC encoding them. The polypeptides can be used to raise antibodies that
CC specifically bind to the PRO polypeptide, for linking a bioactive
CC molecule to a cell expressing a PRO protein and for modulating at least
CC one biological activity of a cell. The PRO polypeptides or
CC polynucleotides are also useful in gene therapy, in chromosome
CC identification, as chromosome markers, or in generating probes. The PRO
CC polypeptides are useful as molecular markers for protein
CC electrophoresis, and the isolated nucleic acids may be used for
CC recombinantly expressing those markers. The PRO polypeptides and nucleic
CC acids may also be used in tissue typing. Anti-PRO antibodies are useful

CC in diagnostic assays for PRO, and in affinity purification of PRO from
CC recombinant cell culture or natural sources. The sequences presented in
CC ABU60478-ABU60624 are the PRO polynucleotides of the invention.
CC Note: The sequence data for this patent is also available in electronic
CC format from USPTO at seqdata.uspto.gov/sequence.html.

PT New secreted and transmembrane PRO polypeptides (e.g. PRO183, PRO184,
PT PRO361 or PRO846) useful as targets for therapeutic intervention in
PT cancers (e.g. lung or breast cancers), or for diagnosing these cancers
PT -

XX

PS Claim 12; Fig 99; 647pp; English.

XX

CC The invention discloses isolated PRO secreted/transmembrane polypeptides
CC comprising a sequence without signal peptide and the nucleic acid
CC encoding them. The polypeptides can be used to raise antibodies that
CC specifically bind to the PRO polypeptide, for linking a bioactive
CC molecule to a cell expressing a PRO protein and for modulating at least
CC one biological activity of a cell. The PRO polypeptides or
CC polynucleotides are also useful as pharmaceuticals, diagnostics,
CC biosensors or bioreactors, for detecting or treating e.g. tumours in
CC mammals, e.g. humans, dogs, cats, cattle, horses, sheep, pigs, goats or
CC rabbits as targets for therapeutic intervention in certain cancers (e.g.
CC colon, lung or breast cancers) and diagnostic determination of the
CC presence of these cancers. The PRO polypeptides are also useful as
CC molecular weight markers or for chromosome identification. The PRO genes
CC are useful as hybridisation probes or for screening libraries of human
CC cDNA, genomic DNA or mRNA. The PRO genes may also be used in gene
CC therapy, particularly for replacing a defective gene. The sequences
CC presented in ABU58900-ABU59046 are the PRO polypeptides of the invention.

PT Novel secreted and transmembrane polypeptide for modulating biological
PT activity of cell expressing the polypeptide, identifying agonists or
PT antagonists of polypeptide, and as molecular weight markers -

XX

PS Claim 12; Fig 99; 649pp; English.

XX

CC The present invention relates to the isolation of novel human PRO
CC polypeptides, and the polynucleotide sequences encoding them. The
CC PRO polypeptides are secreted and transmembrane proteins. The PRO
CC polypeptides are useful for detecting other PRO polypeptides, for
CC linking bioactive molecules to cells expressing PRO polypeptides,
CC for modulating biological activities of cells expressing PRO
CC polypeptides, and for for identifying agonists or antagonists.
CC The polynucleotide sequences encoding PRO polypeptides are useful as
CC hybridisation probes, in chromosome and gene mapping, in the generation
CC of antisense RNA and DNA, in the preparation of PRO polypeptides, for
CC generating transgenic animals or knockout animals, to construct
CC hybridisation probes for mapping the gene which encodes the PRO
CC polypeptide, and for the genetic analysis of individuals with genetic
CC disorders, in gene therapy, for chromosome identification, as
CC chromosome markers, and for generating probes for PCR, Northern

CC analysis, Southern analysis and Western analysis. ABU13860-ABU14006
CC represent the human PRO polypeptides of the invention.
CC Note: The sequence data for this patent was obtained in electronic
CC format directly from the USPTO web site at
CC seqdata.uspto.gov/psipsDIDEntry.html.

PT Novel isolated PRO polypeptides e.g., PRO1079, PRO827, PRO791, PRO1131,
PT PRO1316, PRO1183, PRO1343, PRO1760, PRO1567 or PRO4333, useful for
PT stimulating release of tumor necrosis factor-alpha from human blood -

XX

PS Claim 11; Fig 140; 701pp; English.

XX

CC The invention relates to an isolated PRO polypeptide comprising at least
CC 80% sequence identity to the protein sequences appearing as ABU10510-
CC ABU10814 (including a version lacking its associated signal peptide, or
CC an isolated extracellular domain of a PRO polypeptide with or without
CC its associated signal peptide. Also included are the nucleic acids
CC encoding the PRO proteins (being secreted and transmembrane proteins)
CC appearing as ABX16586-ABX16590, PRO expression vectors, host cells,
CC chimaeric PRO fusion proteins, an anti-PRO antibody and a PRO
CC derived oligonucleotide sequence. The PRO polypeptides are useful for
CC stimulating release of tumour necrosis factor-alpha from human blood.
CC The PRO polypeptide PRO6029 is useful for stimulating proliferation or
CC differentiation of chondrocyte cells. The PRO polypeptides as specified
CC in the specification and having differential expression in tumour cells,
CC are useful for detecting presence of tumour in a mammal (such as adrenal
CC tumour, lung tumour, colon tumour, breast tumour, prostate tumour, rectal
CC tumour, cervical tumour or liver tumour. The PRO polypeptide PRO6029 is
CC useful for treating various bone and/or cartilage disorders such as
CC arthritis, and sports injuries. The PRO polypeptides are useful for
CC screening compounds to identify ant/agonists. PRO nucleic acids
CC are useful as hybridisation probes, in chromosome and gene mapping,
CC in the generation of anti-sense RNA and DNA, for the preparation of PRO
CC polypeptides and for generating knock-out animals. The present
CC sequence represents a PRO polypeptide.

XX

PT Novel secreted and transmembrane polypeptide for modulating biological
PT activity of cell expressing the polypeptide, identifying agonists or
PT antagonists of polypeptide, and as molecular weight markers -

XX

PS Claim 12; Fig 99; 655pp; English.

XX

CC The invention relates to a secreted and transmembrane polypeptide, termed
CC PRO polypeptide, and the polynucleotide encoding it. The polypeptide is
CC useful for detecting PRO polypeptides and for linking a bioactive
CC molecule to a cell expressing the above polypeptides, where the bioactive
CC molecule is a toxin, radiolabel or an antibody. The bioactive material
CC causes the death of the cell. The polypeptide is useful for identifying
CC agonists or antagonists of the PRO polypeptide, for preparing variants of
CC PRO, as a molecular weight marker for protein electrophoresis purposes
CC and the PRO polynucleotide is useful for recombinantly expressing those
CC markers. The polynucleotide is also useful as a hybridisation probe, in
CC chromosome and gene mapping, in generation of antisense RNA and DNA, in
CC the preparation of PRO polypeptide, for generating transgenic animals or
CC knockout animals which in turn are useful in the development and
CC screening of therapeutically useful reagents, to construct hybridisation
CC probes for mapping the gene which encodes PRO and for the genetic
CC analysis of individuals with genetic disorders, in gene therapy, for
CC chromosome identification, as a chromosome marker and for generating
CC probes for PCR, Northern analysis, Southern analysis and Western
CC analysis. This sequence represents a human PRO polypeptide of the
CC invention.

 PT immune system, lung, kidney, liver and intestinal system -

XX

PS Disclosure; Page 81-82; 86pp; Japanese.

XX

CC The present sequence represents the mature mouse secretory protein
 CC TGC-440. TGC-440 has antiinflammatory, nephrotropic, immunomodulatory,
 CC virucide, hepatotropic, antiasthmatic and antibacterial activities,
 CC and can be used in vaccines. TGC-440 and the polynucleotide sequence
 CC encoding it can be used to treat, prevent and diagnose immunological,
 CC lung, liver, kidney or gastrointestinal disorders and infectious
 CC diseases, such as hepatitis, nephritis, influenza, asthma, pneumonia,
 CC pulmonary hypertension, and Helicobacter pylori infection. An antibody
 CC immunospecific for TGC-440 is also useful in the above treatment and

CC diagnosis, and also for quantifying the amount of TGC-440 in a liquid
CC specimen.

 XX
 PS Claim 34; Page 512; 675pp; English.
 XX
 CC AAX40438 to AAX40715 represent 5' expressed sequence tags (ESTs) for
 CC human secreted proteins expressed in prostate, and encode the proteins
 CC given in AAY11716 to AAY11993 respectively. The proteins given represent
 CC the signal peptide and an N-terminal fragment of a secreted protein. The
 CC nucleic acid sequences can be used for producing secreted human gene
 CC products. They can also be used to develop products for diagnosis and
 CC therapy. The proteins obtained may have cytokine activity, cell
 CC proliferation and differentiation activity, haematopoiesis regulating
 CC activity, tissue growth regulating activity, reproductive hormone
 CC regulating activity, chemotactic/chemokinetic activity, haemostatic and
 CC thrombolytic activity, receptor/ligand activity, anti-inflammatory
 CC activity, tumour inhibition activity or other activities. The products
 CC can be used in forensic, gene therapy and chromosome mapping procedures.
 CC The sequences can also be used for obtaining corresponding promoter
 CC sequences. The nucleic acids encoding the signal peptides can be used for
 CC directing extracellular secretion of a polypeptide or the insertion of a
 CC polypeptide into a membrane, or importing a polypeptide into a cell.

 XX
 PS Claim 11; Page 120; 142pp; English.

XX
 CC This sequence represents a human secreted protein encoded by a nucleic
 CC acid molecule designated Gene 8 from the human cDNA clone HLHCM89
 CC (deposited as clone ATCC 97955 and ATCC 209074). The gene is expressed
 CC primarily in lung and to a lesser extent in pancreatic carcinoma and
 CC gall bladder and is useful as reagents for differential identification
 CC of tissues in a biological sample.
 CC The invention relates to 20 novel genes and their fragments (AAV69611 to
 CC AAV69630) and corresponding secreted proteins (AAW83931 to AAW83950)
 CC which are useful for preventing, treating or ameliorating medical
 CC conditions e.g. by protein of gene therapy. Also pathological conditions
 CC can be diagnosed by determining the amount of the new polypeptides in a
 CC sample or by determining the presence of mutations in the
 CC polynucleotides. Specific uses are based on which tissues they are most
 CC highly expressed in, and include developing products for the diagnosis or
 CC treatment of central nervous system (CNS) and immune system diseases,
 CC reproductive disorders, cancers, congenital malformations, degenerative
 CC diseases, trauma, inflammatory disease, neoplasia, metabolic disorders,
 CC diseases in testes, placenta, liver, brain and activated T cells, spleen
 CC diseases, lung diseases, heart diseases, rhabdomyosarcoma and disorders
 CC of the endocrine system or other endocrinopathies, e.g. endocrine
 CC polyglandular syndrome, endocrinoma, and endocrine ophthalmopathy,
 CC osteoclastoma and other bone remodelling disorders, bacterial infections
 CC and sepsis. The polypeptides are also useful for identifying their
 CC binding partners.

 XX
 PT Propionibacterium acnes polypeptides and nucleic acids useful for
 PT vaccinating against and diagnosing infections, especially useful for
 PT treating acne vulgaris -
 XX
 PS Example 1; SEQ ID No 27503; 1069pp; English.
 XX
 CC Sequences AAU39105-AAU68017 represent Propionibacterium acnes immunogenic
 CC polypeptides. The proteins and their associated DNA sequences are used in
 CC the treatment, prevention and diagnosis of medical conditions caused by
 CC P. acnes. The disorders include SAPHO syndrome (synovitis, acne,
 CC pustulosis, hypertosis and osteomyelitis), uveitis and endophthalmitis.
 CC P. acnes is also involved in infections of bone, joints and the central
 CC nervous system, however it is particularly involved in the inflammatory
 CC lesions associated with acne vulgaris. A method for detecting the
 CC presence or absence of P. acnes in a patient comprises contacting a
 CC sample with a binding agent that binds to the proteins of the invention
 CC and determining the amount of bound protein in the sample. The
 CC polypeptides may be used as antigens in the production of antibodies
 CC specific for P. acnes proteins. These antibodies can be used to
 CC downregulate expression and activity of P. acnes polypeptides and
 CC therefore treat P. acnes infections. The antibodies may also be used as
 CC diagnostic agents for determining P. acnes presence, for example, by
 CC enzyme linked immunosorbent assay (ELISA).
 CC Note: The sequence data for this patent did not form part of the printed
 CC specification, but was obtained in electronic format directly from WIPO
 CC at ftp.wipo.int/pub/published_pct_sequences.

PT New polynucleotide encoding lysine- and cysteine-rich peptides-like

PT polypeptide useful for modulating the polypeptide level in a plant

PT cell, enhancing disease resistance -

XX

PS Disclosure; Page 159; 163pp; English.

XX
CC The invention relates to an isolated polynucleotide encoding a
CC polypeptide which is related to potato snakins antimicrobial protein and
CC GASA4 or GASA5 or GAST1 homologues, which is referred to as lysine- and
CC cysteine- rich peptides (KCP)-like polypeptide, having a nucleotide
CC sequence from 36 sequences of defined base pairs, given in the
CC specification. A recombinant expression cassette comprising the isolated
CC polynucleotide of the invention is useful for modulating the level of
CC (KCP)-like polypeptides in a plant cell, where the level of (KCP)-like
CC polypeptides is increased, and disease resistance is enhanced. This
CC sequence represents a protein relating to the KCP-like proteins of the
CC invention.

PT New isolated polynucleotide and encoded polypeptides, useful in
PT diagnostics, forensics, gene mapping, identification of mutations
PT responsible for genetic disorders or other traits and to assess
PT biodiversity -
XX
PS Claim 20; SEQ ID No 55690; 103pp; English.
XX
CC The invention relates to isolated polynucleotide (I) and
CC polypeptide (II) sequences. (I) is useful as hybridisation probes,
CC polymerase chain reaction (PCR) primers, oligomers, and for chromosome
CC and gene mapping, and in recombinant production of (II). The
CC polynucleotides are also used in diagnostics as expressed sequence tags
CC for identifying expressed genes. (I) is useful in gene therapy techniques
CC to restore normal activity of (II) or to treat disease states involving
CC (II). (II) is useful for generating antibodies against it, detecting or
CC quantitating a polypeptide in tissue, as molecular weight markers and as
CC a food supplement. (II) and its binding partners are useful in medical
CC imaging of sites expressing (II). (I) and (II) are useful for treating
CC disorders involving aberrant protein expression or biological activity.
CC The polypeptide and polynucleotide sequences have applications in
CC diagnostics, forensics, gene mapping, identification of mutations
CC responsible for genetic disorders or other traits to assess biodiversity
CC and to produce other types of data and products dependent on DNA and
CC amino acid sequences. ABG00010-ABG30377 represent novel human
CC diagnostic amino acid sequences of the invention.
CC Note: The sequence data for this patent did not appear in the printed
CC specification, but was obtained in electronic format directly from WIPO
CC at ftp.wipo.int/pub/published_pct_sequences.

 PT Use of laminin and fragments - for developing products for use in
 PT the diagnosis and treatment of amyloid disease, e.g. Alzheimer's
 PT disease or CJD
 XX
 PS Claim 15; Page 98-101; 132pp; English.
 XX
 CC This is the amino acid sequence of the human laminin B2 chain. The
 CC primary object of the invention is to use laminin, laminin-derived
 CC protein fragments and/or laminin-derived polypeptides as potent
 CC inhibitors of amyloid formation, deposition, accumulation and/or
 CC persistence in Alzheimer's disease and other amyloidoses. The
 CC laminin products (see AAW50888-98) may include mouse or human laminin
 CC A or A1 chain, laminin-B1 or B2 chain, laminin A2 chain (merosin),
 CC laminin G1 chain, the globular repeats of the laminin A1 chain and
 CC the beta-amyloid binding domain of the laminin A chain. A claimed
 CC method for treating an amyloid disease comprises administering a
 CC polypeptide having a conformational similarity to a fragment of a
 CC laminin protein. A method for diagnosing an amyloid disease
 CC involves determining levels of laminin in a sample. Production
 CC of laminin or its fourth globular repeat in vivo provides a method
 CC for in vivo inhibition of beta-amyloid amyloidosis. The products
 CC and methods can be used for the diagnosis, prognosis, monitoring
 CC and treatment of amyloidoses such as Alzheimer's disease, Down's
 CC syndrome and hereditary cerebral haemorrhage with amyloidosis of
 CC the Dutch type (where the specific amyloid is the beta-amyloid
 CC protein), the amyloidosis associated with chronic inflammation,
 CC various forms of malignancy and Familial Mediterranean Fever (AA
 CC amyloid or inflammation-association amyloidosis), the amyloidosis
 CC associated with multiple myeloma and other B-cell abnormalities
 CC (AL amyloid), the amyloidosis associated with type II diabetes
 CC (amylin or islet amyloid), the amyloidosis associated with prion
 CC diseases including Creutzfeldt-Jacob disease, Gertstmann-Straussler
 CC syndrome, kuru and animal scrapie (PrP amyloid), the amyloidosis

CC associated with long-term haemodialysis and carpal tunnel syndrome
 CC (beta 2-microglobulin amyloid), the amyloidosis associated with
 CC senile cardiac amyloid and Familial Amyloidotic Polyneuropathy
 CC (prealbumin or transthyretin amyloid), and the amyloidosis
 CC associated with endocrine tumours such as medullary carcinoma of
 CC the thyroid (variant of procalcitonin).
